

Probationary Officers Recruitment Examination

Pre-Examination Training

Descriptive Paper (Communication Skills)

Set-3

- 1. Draft an email to an IT service provider regarding a delay in the installation of new biometric systems at your branch. Demand a revised timeline and mention potential penalties.**
- 2. The bank's mobile app goes offline for six hours on the first day of the month. Analyze the impact on different customer segments and suggest a communication strategy to mitigate reputational damage.**
- 3. Draft a report evaluating the success of the "Digital Literacy" drive initiated by the branch, including targets achieved and challenges faced in the field.**
- 4. Write a suitable title and summarize the following passage in one-third of the total words.**

Digital banking has transformed the way financial services are delivered in India. Services such as mobile banking, internet banking, UPI, and digital payments have made banking faster, more convenient, and accessible. However, ensuring that elderly citizens and rural populations effectively adopt digital banking remains a significant challenge. Digital literacy, technological barriers, and trust issues often prevent these sections of society from fully benefiting from modern banking facilities.

One of the major challenges is the lack of familiarity with digital devices and applications. Many elderly customers find smartphones, mobile applications, and online transactions difficult to understand due to limited exposure to technology. Fear of making mistakes, losing money, or becoming victims of fraud often discourages them from using digital banking services independently.

Rural populations face additional challenges due to limited digital infrastructure. In many remote areas, unstable internet connectivity, lack of smartphone access, and

inadequate digital facilities restrict the use of online banking services. Moreover, people with limited educational backgrounds may find complex banking terminology and digital procedures difficult to understand.

Cybersecurity concerns are another major obstacle. Increasing incidents of online fraud, phishing calls, and fake payment links have created fear among customers, particularly those who are less aware of safe digital practices. Building confidence among elderly and rural users requires continuous awareness programmes on cyber safety and responsible digital behaviour.

Banks have an important role to play in overcoming these challenges. Regular financial and digital literacy camps should be organised in villages and local communities. Bank employees and Business Correspondents can provide hands-on demonstrations, helping customers learn how to use mobile banking applications, UPI payments, and other digital services. Simple instructions in local languages and user-friendly banking interfaces can further encourage adoption.

In conclusion, digital banking can become a powerful tool for financial inclusion only when every section of society is able to use it confidently. Bridging the digital divide among elderly and rural populations requires a combination of technology, education, awareness, and personalised support. By empowering customers with digital skills, banks can ensure that the benefits of digital transformation reach the last mile of the economy.
